CONDOR / -XL

MOTION AND PRESENCE SENSOR
FOR AUTOMATIC INDUSTRIAL DOORS

Other use of the device is outside the permitted purpose and can not be guaranteed by the manufacturer.
The manufacturer cannot be held responsible for incorrect installations or inappropriate adjustments of the sensor.

CONDOR: for normal to high mounting (3.5 - 6 m)
CONDOR XL: for low mounting (2 - 3.5 m)

DESCRIPTION

1. push buttons
2. infrared detection
3. radar angle
4. radar detection
5. sensor angle
6. bracket
7. cable

TECHNICAL SPECIFICATIONS

Supply voltage:	12V to 24V AC ±10%; 12V to 24V DC +10% / -3%
Power consumption:	< 3.5 W / VA
Mains frequency:	50 to 60 Hz
Output:	2 relays (free of potential change-over contact)
Max. contact voltage:	42 V AC/DC
Max. contact current:	1 A (resistive)
Max. switching power:	30 W (DC) / 42 VA (AC)
Output holdtime:	0.5 s
Mounting height:	CONDOR: 3.5 m - 6 m; CONDOR XL: 2 m - 3.5 m*
Temperature range:	from -30 °C to + 60 °C (except for cold storage)
Humidity:	0 - 95% non condensing
Degree of protection:	IP65
Dimensions:	127 mm (L) x 102 mm (H) x 96 mm (W)
Materials:	ABS and polycarbonate
Weight:	400 g
Cable lenght:	10 m
Conformity:	EN 300 440-2 V1.4.1; EN 301 489-1 V1.9.2; EN 301 489-3 V1.6.1; EN 62311; EN 62479; EN 50581

	microwave doppler radar 🟢	active infrared 🔴
Technology:	microwave doppler radar	active infrared
Transmitter frequency/wavelength:	24.150 GHz	875 nm
Transmitter power density:	< 5 mW/cm²	< 250 mW/m²
Detection mode:	motion	motion & presence
Detection field:	CONDOR: 4 x 5 m ; CONDOR XL: 4 x 2 m**	4 m x 4 m (emitting spots***)
Min. detection speed:	5 cm/s	5 cm/s to activate detection
Reaction time:	100 ms	250 ms
Tilt angle:	-8° - 22° (relative to sensor front face)	15° - 45°

Specifications are subject to changes without prior notice.
Measured in specific conditions

* depending on size and nature of target
** measured at 30°, field size 9, mounting height: 5 m, XL: 3.5 m
*** zone detected by spotfinder, slightly bigger than actual detection field

LED- SIGNAL

|	Motion detection Value indication		LED flashes

SAFETY INSTRUCTIONS

Only trained and qualified personnel may install and setup the sensor.

After installation, save an access code to lock the sensor.

Test the good functioning of the installation before leaving the premises.

The warranty is void if unauthorized repairs are made or attempted by unauthorized personnel.

The manufacturer of the door system is responsible for carrying out a risk assessment and installing the sensor and the door system in compliance with applicable national and international regulations and standards on door safety.

MOUNTING TIPS

Do not cover the sensor.

Avoid extreme vibrations.

Avoid proximity to neon lamps or moving objects.

Avoid exposing the sensor to sudden temperature changes.

*In cold storage rooms (<0°), the functionality of the infrared part is affected by condensation, frost, mist etc. The radar part functions properly.

HOW TO USE THE REMOTE CONTROL

After unlocking, the red LED flashes and the sensor can be adjusted by remote control.

If the red LED flashes quickly after unlocking, enter an access code from 1 to 4 digits.
If you do not know the access code, **cut and restore the power supply**. During 1 minute, you can access the sensor without introducing any access code.

## ADJUSTING ONE OR MORE PARAMETERS

CHECKING A VALUE

The number of flashes indicates the value of the chosen parameter.

RESTORING TO FACTORY VALUES

SAVING AN ACCESS CODE

The access code is recommended for sensors installed close to each other.
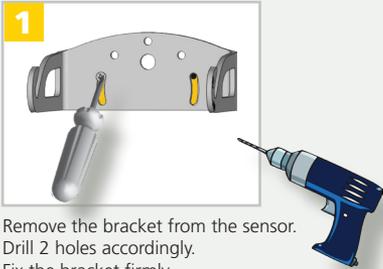

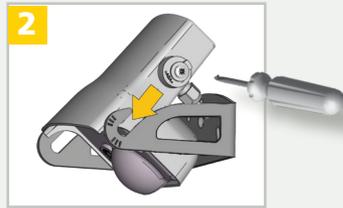

DELETING AN ACCESS CODE

If you do not know the access code, **cut and restore the power supply**.
During 1 minute, you can access the sensor without introducing any access code.

1 MOUNTING

1

Remove the bracket from the sensor.
Drill 2 holes accordingly.
Fix the bracket firmly.

2

Position the sensor on the
bracket and fasten the screws.

2 WIRING

30°

RECOMMENDED

m	2	1	0	1	2

45°

NOT RECOMMENDED

All detection field dimensions are measured in specific conditions (mounting height: 5 m, field size: 9).
Infrared field = emitting spots detectable by Spotfinder. The actual detection field is slightly smaller and influenced by external factors.
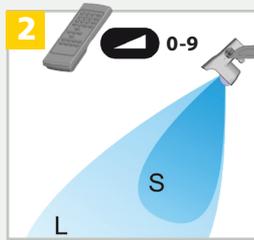

4 **RADAR FIELD**

1

By turning this screw, the radar field angle is reduced or increased (from -8° to +22°).
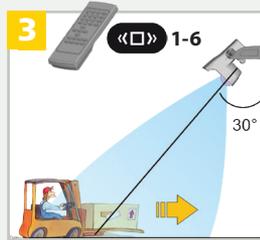

2 0-9

Adjust the field size. p. 6

3 «□» 1-6

30°

Choose the right detection filter for your application. p. 6

The total angle is the sum of the sensor angle and the radar field angle.   ▢ CONDOR   ▢ CONDOR XL

All detection field dimensions are measured in specific conditions and with a field size value 9.

5 **SETUP**

15-20 s   3 s

0

Launch a setup to make a reference picture.
Step out of the detection field and do not leave any tools inside the detection field.

After first power on, the sensor launches a setup and after each power cut a short setup is launched.

IMPORTANT: Test the good functioning of the installation before leaving the premises.

POSSIBLE REMOTE CONTROL SETTINGS

🔒 ▶ ⬛ ▶ 0 ▶ 1 ▶ 2 ▶ 3 ▶ 4 ▶ 5 ▶ 6 ▶ 7 ▶ 8 ▶ 9 ▶ 🔒 🔒

FIELD SIZE	⬛	XXS	XS	S	>	>	>	>	L	XL	XXL
DETECTION FILTER	«□»		1	2	3	4	5	6			

Detection of ALL TARGETS (pedestrians and parallel traffic are detected)	Detection only of VEHICLES MOVING TOWARDS THE SENSOR (pedestrians and parallel traffic are not detected + immunity filter)
1 no specific filter 2 immunity filter against disturbances (recommended in case of vibrations, rain etc.)	3 if total angle is ± 15° 4 if total angle is ± 30° 5 if total angle is ± 45° 6 if total angle is > 45° **TIP:** Always check if the chosen value is optimal for the application! The mounting height and object size or nature can influence the detection. The vehicle detection filter increases the response time of the sensor.

⬜ FACTORY VALUES   RESETTING TO FACTORY VALUES: 🎛⚫9

IMPORTANT: Always finish an adjustment session by launching a setup.   🎛⚫0

⚪	The door remains closed and the LED is OFF.	The sensor power is off.	**1** Check the wiring and the power supply.
⚪	The infrared sensor does not react.	The infrared power emission is too low according to the mounting height.	**1** Launch a new setup. Step out of the detection field!
🟢	The door opens for no apparent reason.	The sensor detects raindrops or vibrations.	**1** Make sure the detection mode is unidirectional. **2** Increase the detection filter value.
		The sensor is not installed properly.	**1** Fasten the sensor firmly.
		In highly reflective environments, the sensor detects objects outside of its detection field.	**1** Change the antenna angle. **2** Decrease the field size. **3** Increase the detection filter value.
🟢	The vehicle detection filter is used, but pedestrians are still detected.	The chosen value is not optimal for the application.	**1** Increase the detection filter value. **2** Decrease the sensor angle. **3** Increase the mounting height.
🟢 🔴	The door opens and closes constantly.	The sensor is disturbed by the door motion or vibrations caused by the door motion.	**1** Make sure the sensor is fixed properly. **2** Make sure the detection mode is unidirectional. **3** Increase the sensor angle and/or radar angle. **4** Increase the detection filter value. **5** Reduce the field size.
🔴	Sporadic presence detections for no reason.	The presence detection is disturbed by rain or lamps.	**1** Set the IR-curtain immunity to value 3.
		The sensor is not installed properly.	**1** Fasten the sensor firmly.
🔴	The red LED is permanently ON after a setup.	The sensor has failed the IR-setup.	**1** Launch a new setup. Step out of the detection field!
✳️	The setup lasts more than 30 seconds.	The setup is disturbed.	**1** Make sure the detection field is clear and launch a new setup.
		Another sensor causes interferences.	**1** Select a different frequency for each sensor.
✴️	The sensor does not unlock and the red LED flashes quickly.	The sensor needs an access code to unlock.	**1** Enter the right access code. **2** If you do not know the access code, cut the power supply and restore it to access the sensor and change the access code or delete it.
	The sensor does not respond to the remote control.	The remote control batteries are weak or improperly installed.	**1** Check the batteries and change them if necessary.
		The remote control is badly pointed.	**1** Point the remote control towards the sensor.
		The sensor is not powered.	**1** Check the power supply of the sensor.
