

## BEA'S ENVIRONMENTAL AND SUSTAINABLE DEVELOPMENT POLICY

BEA designs, manufactures and sells motion and presence detectors for the automatic pedestrian and industrial door markets, as well as for access control and passenger transport.

Our activities and products are designed with sustainability and respect for the environment in mind. This commitment is reflected in the very nature of our products, reconciling user safety with improved control of energy consumption by our customers and end-users.

BEA's management is committed to continuous improvement of its environmental performance through its environmental management system, based on ISO 14001 guidelines. Our main areas for improvement are:

### RESOURCES and ENVIRONMENT

Eco-design: Reduce the impact of our products at different stages of their life cycle, notably by reducing the intrinsic consumption of sensors in new developments.

Environmental protection and pollution: Understand and limit the impact of our production processes on the environment and take steps to prevent pollution.

Energy: Reduce our energy consumption and promote renewable sources in our manufacturing processes.

Waste management: Reduce, sort and recycle our production waste.

### CARBON EMISSIONS

Measure the carbon footprint of our activities across scopes 1, 2 and 3, and implement a strategy to reduce our emissions.

### EMPLOYEE COMMITMENT

Raise staff awareness and increase their involvement in BEA's environmental approach.

### COMPLIANCE

Ensure compliance with environmental legal requirements both in our production processes and in the design of our products.

### PARTNERS & NETWORK

Partners: Involve our suppliers and partners in the search for sustainable solutions.

Communication: Communicate transparently, for example through our EcoVadis score.

Management is committed to providing the resources needed to achieve its objectives.

  
Executive Management,  
Elmar KOCH
